### **Job Description**

Wind Turbine Supervisor will report to the Wind Turbines Generator Manager of Pacifco Energy Vietnam developing and managing wind energy projects in Vietnam. Primary responsibilities (but not limited to) are:

- In charge of all technical matters of Wind Turbines in wind energy projects including paper works/soft data management.
- Undertake technical bid reviews and tender evaluations related to wind projects.
- Supervising all contracting in relation to Wind projects (including negotiation, drafting, terms, and follow up post execution).
- Schedule & budget management of the wind turbine installment including managing the logistics of its delivery
- Quality control of equipment selected by each specific project.
- Identify and manage technical risks of the project and find solutions to mitigate it.
- Ensure Health & Safety guidelines are observed and implemented during project period
- including all parts

### **Requirements**

- Electrical University degree (Turbines/Aerospace are preferred, overseas education is a plus)
- Experience in Wind Turbines projects (multiple preferred). Minimum 18 months.
- Knowledge of legislation required for project development, and logistic experience for construction of such projects.
- Project management, planning and contractual experience
- Responsible team player.
- Position requires extensive travel and is willing to travel to non-developed areas
- Business English; proficient in reading, writing and speaking is a must
